A light grid

Abstract

A light grid is provided for the detection of objects in a monitoring region 5 having a transmitter unit comprising a plurality of light transmitters and a receiver unit comprising a plurality of light receivers in which respective pairs of light transmitters and light receivers associated with one another and bounding the monitoring region can be activated in succession in time in dependence on a synchronization signal transmitted between the 10 transmitter unit and the receiver unit, with at least one light guide being provided for the transmission of the synchronization signal.
